Crossed-Ankle Sitting Position

By SFC Grant Singley, USAMU Service Rifle Team Member

We want your feedback!
Please let us know what you think about TFS. Do you have an interesting story or article that you would like to share? If so, [please let us know!](#)

Reader Comments:

Thank you for this excellent e-newsletter. The links and information are great.
Sincerely,

There are two primary variations of the sitting position that are used during Highpower competitions. The variations are crossed-ankled and crossed-legged. This article covers the crossed-ankled sitting position.

You may want to try the crossed-ankled position if you have excessive pulse in the crossed-legged position and/or your body type prevents you from getting into the crossed-legged position. I would also like to say that all the cool people to include myself shoot the crossed-ankled position. Note: This article is written from a right-handed shooter's perspective.

First, the crossed-ankled position is not for everyone. Many people find that their legs are too flexible to keep their knees up off the ground. A quick test is to sit down on the ground, extend your legs and cross your ankles (left over right). Lean forward and place your elbows on your knees as if you were actually holding

John B.

I greatly enjoy the USAMU shooting tips in the newsletter and also being able to find them on-line. Regards, Ray in FLA

EXCELLENT BRIEF UNDERSTANDABLE ARTICLE ON SITTING RAPID POSITION, BEING CLOSE TO 60 THIS IS MY WORST POSITION AND ANY HELP I CAN GET IS GREATLY APPRECIATED! GOOD ARTICLE; MARTY

SFC Singley:

It has been a while, but I sent CMP a request for a TFS article on possible means by which us "centrally endowed" (read that as 'fat') shooters might work ourselves into a useable sitting position. Spring is coming and I will be trying to get ready for matches. Your article has been copied and I will read it and work on trying the options you have provided. Thanks very much for your individual military service to our Nation and for your personal efforts to help other shooters improve our skills. Melvin C.

Really enjoyed the M1 for Vets article. Its really good to read something that was done for

the rifle. Your knees need to be able to stay up off the ground in order to have enough elevation in your position.

If you find that you are "inflexible" enough to shoot in the crossed-ankled position, I will now walk you through the process.

1. Put on your shooting coat, grab your rifle and sit down on the ground facing the "target". Try to set up the position so that your feet and body are pointing straight down range. You may pivot your feet and body slightly to the right if desired.
2. Your left elbow may be placed somewhere forward of the left knee so that the lower part of your tricep is resting across the knee.
3. Your right elbow may be placed in the bend of the right knee.
4. Your non-firing hand and butt-stock placement will vary according to your size/height.
5. You are now at the point where you must fine-tune the position. Vary the placement of your non-firing hand, butt-stock, elbows and legs until you are steady and comfortable. This may take some time. You can condition your body by getting into this position for 10-15 minutes at a time while watching TV.
6. To adjust your natural point of aim: Leave your feet in place and slide the seat of your pants left, right, forward or backward as needed.

Once you have dry-fired and feel comfortable in the position, it is time to go to the range and impress your buddies with your new found ability to shoot sitting rapid-fire. You may have to adjust your position to

wounded vets. The match must have been a real wingding. Too cold for me. There is alot of history 1903 Springfield and the M1 . I had to sleep with my o3 for baning the butt on the deck in boot camp. Anyway thanks again for the story.

Jim N., Ok

I enjoy the TFS. In fact, occasionally I like to print some of the articles to be able to review them in the future.

James L. M.

Whenever we come back in from the field it's always a good day when "The First Shot" is in. I drill the guys in the fundamentals – many of which I learned and fine tuned at CMP matches – and it comes back in spades out here when it really counts!

Finally caught up with the October '06 story: A Rifle For Shifty. It was simply one of the best things I've read. As someone who had two uncles in combat in WWII, one air corps and one infantry, I will forever

accommodate for the effects of recoil. Your wobble area should be mid-ring 10 or better. Again, this may take some time and experimentation.

A rock solid position will not guarantee a "10X clean" on every string you fire if you do not apply proper sight alignment and trigger control. It is easy during a rapid-fire string to get excited and break shots that are less than perfect. How can I fix that, you ask? My answer may sound simplistic and sarcastic, but here we go..... DON'T BREAK A SHOT UNLESS IT IS SITTING IN THE MIDDLE!!!! The secret is now out and DeMille's record will fall soon. Seriously, you have plenty of time during a rapid-fire string to let the rifle settle in the middle before pulling the trigger. Work on becoming highly efficient in your shot process so that you can spend the most time possible actually focusing on the front sight and moving the trigger smoothly to the rear. If the rifle does not settle back in the center after a shot, there is nothing stopping you from physically moving the rifle back into the center and then breaking a shot. A slight amount of muscle tension with the non-firing hand and arm is acceptable and may be necessary to keep the sights in the middle after recoil.

I have not mentioned the use of a shooting mat yet. The use of a mat is totally decided by personal preference. I usually sit on the mat with my feet on the ground in front of it. If the firing point has thick green grass on it, you may not want to use a mat, but if the point is hard and rocky, the mat may help stabilize the position.

The USAMU Service Rifle Team is also answering your questions pertaining to Service Rifle Shooting including topics such as Equipment and Ammunition, Shooting Positions and Shooting Techniques and Tactics. Go to http://www.odcmp.com/usamu/shooting_tips.htm to view the latest questions and answers. If you

The article about Bill
Krilling was very
good, a great
shooter, coach and a
gentlemen to boot!
Ruth S.

Thanksfor the great
stories and tips.
Even old dogs can
learn new tricks. This
is great for keeping
the CMP active.
